Education

M.Sc. Data Science

The American College, Madurai

CGPA- 9.1/10

B.Sc. Computer Science

The American College, Madurai

CGPA-8.3/10

Skills

Microsoft Power Platforms

- Copilot Studio
- Power Automate
- Power Apps
- SharePoint
- Dataverse
- Power Pages

Machine Learning

- Machine Learning with AI
- Data analysis
- Python Languages
- Web designing

Certifications

- Machine learning with Python on IBM Cloud
- Tensor Flow and Keras
- UI/UX for Beginners
- PHP with MYSQL connectivity
- JAVA

Languages

1. English
2. Tamil

👤 Career Objectives

Power Platform Developer with 2.6 years of experience in designing, developing, and deploying automation solutions using Power Automate, Power Apps, and SharePoint. Skilled in building end-to-end workflows, integrating applications, and optimizing processes to enhance efficiency, with a strong focus on applying technical expertise and problem-solving in dynamic team environments.

📁 Internship & Experience

POWER PLATFORM DEVELOPER, ROR TECHNOLOGIES

- Built business apps with Power Apps, automated workflows using Power Automate & Copilot Studio.
- Developed dashboards in Power BI and implemented RPA projects.

MACHINE LEARNING INTERNSHIP at Mentorness

- Completed a one-month internship on real-world Machine Learning projects using Python.
- Gained hands-on experience in data preprocessing, algorithm implementation, and model building.

WEB-SITE DEVELOPMENT

- Using the WordPress platform, created a **website** for the **Magicx Shutterzz Studio**.

📖 Achievements & Awards

- Won 1st prize in the Paper Presentation on the theme of “**Artificial Intelligence**” at the inter-college competition organized by The American College, Madurai in February 2023.
- Won 2nd prize in the **Web Designing** at inter-college competition organized by The American College, Madurai in February 2023.
- Won 3rd prize in the **Web Designing** at inter-college competition organized by Arul Anandar College, Madurai in February 2023.

📖 Projects

HANDWRITING RECOGNITION USING CNN

- Created a method for automatically recognizing handwriting using Convolutional Neural Networks (CNNs), with the goal of increasing accuracy and decreasing test times. Worked with a dataset of more than 1,00,000 handwritten names to evaluate and refine many CNN models for real-time applications.

CAMPUS REQUIREMENT SYSTEM

- Campus Requirement System is used to automate and simplify the process of registration, company view, details of applied students and check the eligible criteria of student for the placement of particular company and also view the list of selected student details.

Projects

1. Transmission power

This project focuses on automating and streamlining the document approval workflow within the organization, covering multiple roles such as Central Planning Coordinator, Central Planning Manager, Department Coordinator, Department Head, and EVP Office Administrator. The system ensures that reports and documents move through a structured approval cycle with clearly defined actions like Send Back, Send Comments, Approve, and Reject.

The solution provides:

- Role-based access and approvals
- Centralized document management
- Real-time visibility across all departments
- Automated notifications and escalations

2. Project Management Tool

This project focuses on building a centralized project management system to streamline tracking of tasks, issues, and resources across multiple teams. The system ensures efficient collaboration by allowing role-based access, project-specific dashboards, and automated workflows for task assignments, status updates, and issue escalations.

The solution provides:

- Role-based access and project tracking
- Centralized task and issue management
- Automated workflows for task assignment and status updates
- Real-time dashboards and progress tracking
- Notifications and reminders for deadlines and pending tasks

Copilot Agents

1. Cash Forecasting Agent

This agent focuses on automating and streamlining the financial cash forecasting process. It enables finance teams to input, analyze, and predict cash inflows and outflows more efficiently. The system supports accurate forecasting by leveraging structured workflows and guided interactions.

The solution provides:

- Automated cash forecasting workflows
- Structured input collection for finance data
- Real-time prediction and visibility on forecasts
- Easy integration with existing financial records

2. IT Helpdesk Agent

This agent focuses on handling IT support requests through automation, reducing response times, and improving service efficiency. It provides a conversational interface for employees to log issues, track status, and receive quick resolutions.

The solution provides:

- Automated ticket creation and assignment
- Real-time updates on IT request status
- Knowledge base support for common IT issues
- Escalation workflows for critical problems
- Role-based visibility for IT teams and employees

3. HR Onboarding Agent

This agent focuses on simplifying and digitizing the employee onboarding process. It ensures new hires receive the required information, complete formalities, and access HR resources seamlessly through conversational guidance.

The solution provides:

- Guided onboarding workflows for new hires
- Document submission and verification support
- Centralized access to HR policies and resources
